Background Image: The background image file and its location are important options that set the mood, layout, and look of the image. For example, this photo, in its original location, was created by partially covering a six-pack of beer and photographs of plants. The location of this image file is the left side of the folder on the Downloads panel in Bridge. Figure 1-2 shows a preview of a photo file that would be renamed `15f4ed1edb70.jpg`. \*\*Figure 1-2:\*\* Preview an image in Photoshop before saving it. See "Inverting an Image" in this chapter for details on how to do image edits in Photoshop. Setting the Look of an Image In this exercise, you use Photoshop's myriad of options to set the mood and feeling of an image. 1. Create a new document that's 4 inches by 4 inches and save it as a Photoshop Image. 2. Double-click the new document's tab to import an image to the background. Images that are imported are called Background Images. Don't worry about viewing the image first; you can view the document in place of the background as well. The file named `15f4ed1edb70.jpg`, shown in Figure 1-2, is a sample file. 3. From the appearance menu, choose between Classic and The Order Of Things. Then choose Screen from the Environment pane. This step enables you to preview your background image. 4. From the Type panel, choose a text style to add to the image. Select Italic from the Type options and then click Add. A text box with the font and size you selected is now displayed at the bottom of your document. Type your text. To see an image change over time, Photoshop may be faster if you use the Background Preview feature. To display the Background Preview feature, click the Background Preview button at the bottom left of the layer thumbnail area to the right of the canvas window. 5. Arrange the text so it's in the center of the canvas and move the background image so that it covers the entire canvas. Then press the Page Down key to fit the image to the left side of the canvas. When the image reaches the upper-right corner, it turns to show that it's "selected." 6. You can now delete the background layer from

Our initial-outlook for 2020 Image: 20th Century Fox By Sergey Korshunov (first draft) If you look at the current situation in the film industry, there is much that is unavoidable. The industry needs to generate new revenues, but on the other hand, significant investments are necessary. At least, that's what is thought. The situation is becoming even more complex as the format films make more and more impact on the revenue of the studio. Usually when we talk about the economics of the production industry in our office, there are some assumptions. First of all, it can be assumed that the film's cost does not exceed \$100m. There are a few exceptions, for example, are the blockbuster movies of the studios such as Universal, Paramount, Warner Bros, which usually cost \$190m and up, and huge movies, such as Black Panther. All other production costs are reduced by the studio. Then there is a second assumption — movie industry is completely oriented on releasing movies in theaters, there are still films that are released through digital download or subscription models. Obviously, these films can be also released in cinemas, but it is often not a good strategy — the number of people choosing to watch a movie in a cinema is less than the number of people watching on Netflix or another streaming platform. In addition, during the process of a production process, the movie rarely reaches the box office number of \$1 billion, let alone \$2 billion, \$3 billion, \$5 billion. Sometimes, the box office of a movie is so small (even positive, but with a small number of people watching) that it does not cover production expenses. If, for example, the movie is released in the United States, the producer needs to take care of taxes and royalties. It can be assumed that the studios do not pay royalties by themselves — it is the owner of the copyright. And even in the case that the movie was released in the United States and everywhere else, some royalties must be taken into account. All in all, it is a very hard task to get a \$2 billion box office record. However, once again, this is not the main focus. What we are talking about here is the financial losses of the movie industry. The vast majority of the movies released in cinemas around the world generate very little money. And that is because the sales that most of the movies generate are not enough to cover

## What's New In Photoshop 2021?

Q: Solved hint - Combinatorics not related question - Probability with Prior Conditional Probability This is not homework question. Find the Conditional Probability  $P(X | Y)$   $P(Y)$ , given the following -  $P(X) = \frac{1}{4}$   $P(Y) = \frac{1}{2}$  Given  $P(X|Y)$ , find  $P(X)$ . So I started by writing down the formula for Conditional Probability as follows :  $P(X|Y) = \frac{P(X \cap Y)}{P(Y)}$  where  $X \cap Y$  is the intersection of  $X$  and  $Y$ . So, to find  $P(X|Y)$ , I did the following:  $P(X|Y) = \frac{\frac{1}{4} \frac{1}{2}}{\frac{1}{2}} = \frac{1}{2}$  Then, to find  $P(X)$ , I did the following:  $P(X) = P(X|Y)P(Y) + P(X|\bar{Y})P(\bar{Y})$  The two terms on the right are basically  $P(A)$  and  $P(B)$  where  $A$  is the event that  $Y$  is true, and  $B$  is the event that  $Y$  is false. So the answer from the book I am going through is  $\frac{1}{8}$ , but it isn't even close. Please help! P.S. I think I've tried every single part of the given equation, but I am unable to understand how to put them together into a solution. A: Recall that  $X \cup Y = Y$  and  $X \cap Y = \emptyset$ . This implies that  $X$  and  $Y$  are disjoint, and that  $P(X) = P(Y) = \frac{1}{2}$ . The conditional probability can be rewritten as  $P(X \mid Y) = P(Y \mid X) / P(Y) = \frac{P(X \cap Y)}{P(Y)} = \frac{\frac{1}{4} \frac{1}{2}}{\frac{1}{2}} = \frac{1}{2}$  Similarly,  $P(Y \mid X) = \frac{P(X \cap Y)}{P(X)} = \frac{\frac{1}{4} \frac{1}{2}}{\frac{1}{4}} = \frac{1}{2}$
