Portable gaming machines are meant to be portable, but many of the most popular games for these machines usually run poorly on the smaller displays. In a lot of cases, mobile games look better than the games on the consoles in the portable versions. But one of the things that youll notice is that portable games run well on the Nintendo Switch while Gamecube games run pretty badly on it. Gaming on a Nintendo console really isnt as friendly as other gaming devices and it certainly takes a lot of getting used to, but if youve played a Nintendo game on another console before, youll find the transition relatively simple. You can't use a code or some special software hack because they are designed to be sold by game companies to make money. If you wanted to use one of those codes, you have to buy the game from the game company. If someone gets a code and does not buy the game in the future, the code will not work when they get the game for the next few years. There's also a number of regular indie game developers that are still waiting on their previous game's sources to be uploaded to the eShop. These folks have lots of pages of comments from Nintendo regarding their game requests. They are frustrated. You should also remember the indie devs who are struggling because of their older games, and the first generation of the console, which were sold at much lower prices. Even with the launch price reductions, indie games will not reach their current popularity levels (at least not in their entirety) until Nintendo Switch is fully outfitted. The second and third generation games will not get the indie developers recognition they deserve, until they also reduce the cost of their games. They'll also need more motivation to actually launch and complete these games in the future, because they will be trying to sell their first-generation games at a loss.
