FIX Lost IMEI No Signal On Lenovo K5 Play L38011

There's no other way to do it: we have to rip all the functionality out of Signal, extract the code that we don't want, and provide a reimplementation of all of our half-assed API stubs to provide the same functionality. We can't break compatibility and provide a fallback implementation for our users out of fear of being sued. If we go the manual route, we'll add features that our users will want and remove features that our users don't want. We'll give a consistent Android-like experience to as many as possible. Since Signal isn't popular enough to get a lot of resources to re-implement their entire implementation, we're choosing the route of porting the functionality that Signal doesn't use by going forward with manually creating a new implementation. This is why we just recently implemented the pathfinding, because it was a complex task that could have taken months of development time. The only alternative I could see is to do what I see Microsoft is doing: sign an NDA and make all the code proprietary, allowing anyone to use it and only allowing implementation details to be published. If we're still not allowed to use open source APIs, you can't do much on Android anyway. If you want to use Signal, you have to use the proprietary implementation that you have to use. That's absurd. If Signal is going to use the same servers and API libraries that FCM uses, then they're going to have to use the FCM APIs in the way we do. If they don't, they'll have to provide a fallback implementation. main target for cnk

witch was to make a good tracking system called mkspy to make we can see whats going on.. we have seen a lot of cases here and there where imes are lost or stolen and all kinds of cases to be able to track phones with the help of this app we made this app 5ec8ef588b
