Before you install any Adobe product, you need to make sure that you have the correct version. If you are getting a message that says your version is a trial version, then you'll need to buy the license key. You can find the license key on the Adobe website, as well as the program's installation CD. First, you need to download the version of the software that you want to install. Then, you need to open the program and locate the installation CD. Copy the license key to your computer and follow the on-screen instructions to complete the process. If you do not have the license key, you can go to the Adobe website and select the version that you want to install. After this, you should locate the installation CD and follow the on-screen instructions to install the software.

As with most word processing suites, Photoshop Elements 2016 feels a little slow if compared to the desktop version. Most of the time, it's still quite legible on the iPad Pro when using the Fujifilm Pencil, however, if I really want to edit some text, it might get a little tiresome scrolling on the iPad Air 2 to get to the extreme right corner of the page.

On the upside, Elements does offer quite a few tools for achieving imperfections such as the clone stamp which can be used to remove unwanted objects or focus issues in images. I did however found it a little difficult to accurately select the precise areas of the object I want to clone, especially when scaling or rotating the bitmap.

Similarly, Layer Masks are handled rather awkwardly by Elements; either by using the eyedropper tool or by holding the letter "G" and drawing round areas one line and one pixel at a time. Both these methods are incredibly slow, especially when working on a large document or mask. Again, the eyedropper tool would be more efficient when done on the desktop version, as it can determine which areas of pixels are transparent, which are opaque and which are clear. I'm using Photoshop Elements 2017 for my drawing/painting tasks as I've always been a desktop user...the iPad version just doesn't quite cut it yet. I'm using the Fujifilm pen with no issues except that when I scale images it loses most of the detail. I could also find it easier to work with an iPad Pro + MacBook as I can use the iPad to draw on paper and use a stylus for fine legible strokes...I think there are many apps that can do this but the iPad doesn't quite match yet. However what can't be avoided is that the iPad Pro is controlling the tablet on which we use the pen (Elements)...I think this is a great direction to the future. Unfortunately, I felt that Transform briefly locked up (while I could draw) which could be a major inconvenience depending on how often it happens to you...other than this, features are working great. The pen is great, the iPad Pro is great, and the tools are great. There's so much that I'd like to change about Elements but Adobe is clearly too focused on desktop apps and not a lot of the iOS ideas have been adopted yet. But in time, we'll see.

You can import and export PDF files from your HD. Import and export PDF is the most useful of Photoshop's PDF features. Put files online and they'll be available anywhere you have an internet connection, providing you can access the files. You could print those pages on a Mac, feed them in to an iPad to edit as you go, or use them as a simple, free way to share a virtual set of images among friends. Adobe's 2019 release of Photoshop CC a move to the stable native GPU APIs. This means the software is able to run on discrete cards now, rather than with the integrated Intel graphics that have powered its predecessor. This is a boon for professionals who work with a wide range of different files on a regular basis, but it'll be up to Photoshop whether it will be considered as an upgrade for people who still work with older versions. The new APIs make it possible for the software to be more efficient with the content it works on. It also saves a considerable amount of memory. Although the base license for Photoshop elements was free, you'll have to pay $8.99 (€7.99) for the software's upgrade to the latest version. There's also a subscription for Photoshop that includes access to a monthly adobe stock, regular upgrades, access to zoom and crop features, and licensing for 2 apps. Photoshop can also use DirectML(launched in Photoshop CC2019 and later versions) as a way to send content to the GPU for processing. Unlike the new APIs, DirectML is not compatible with every system. It requires both graphics hardware and operating system support. A DirectML specification sheet tells us that the software supports Mac OS X 10.9. and the Windows 10 Creators Update and later. That means you can use DirectML to access a single GPU on a Windows machine, but you'll need a Mac to access one on the Mac.
